# DEMOGRAPHICS USA 1992

## WHY **DEMOGRAPHICS USA** IS A VALUABLE TOOL FOR YOU

In the business climate of America toady, the **SBP DEMOGRAPHICS USA** has become a more essential and productive marketing and sales tool than ever before. For, as perhaps the most complete collection of marketing statistics published, **DEMOGRAPHICS USA** is used by more and more businesses in an almost infinite variety of ways. Combined with internal company records, it has become a widely acclaimed sales and marketing tool of extraordinary versatility and value.

The act of ordering and using **DEMOGRAPHICS USA** is a clear indication of your awareness that today's new business challenges must be met by utilizing more objectively developed marketing strategies and a new range of productive disciplines; those that parallel what is going on *now*.

## WHAT'S IN **DEMOGRAPHICS USA**

The Survey of Buying Power **DEMOGRAPHICS USA** consists of over 900 pages of maps and figures divided into three volumes.

It includes state and county outline maps, population and detailed characteristics based on the 1990 Census, the household income distribution, Effective Buying Income, total retail sales and four Buying Power Index series.

It covers retail sales by twelve individual Store Groups for both the current year and the 1987 Economic Census. It also covers 10 Merchandise Line Categories. Comparisons and growth rates can be evaluated.

It also presents TV market data and metropolitan and county market projections, for Population, Effective Buying Income and Retail Sales.

## HOW THE INFORMATION IN **DEMOGRAPHICS USA** IS ORGANIZED

The information is organized, for the most part, within a geographic hierarchy; by region, state, metropolitan area and county and by TV market (ADI: Area of Dominant Influence). Summaries are also presented.

For each geographic area, you will find: information dealing with the area's total population, its percentage of the U.S. total, break-outs by age, sex, number of households, number of persons in household, etc.

In addition, counties, metropolitan markets and TV markets are ranked by key population designations. That means, for example, if a population characteristic or combination of characteristics is especially relevant to the sale of your product, you can isolate and rank those geographic areas in which the densest concentration of such characteristics exist.

## DEFINITIONS OF THE MOST COMMONLY USED DESCRIPTIVE CATEGORIES

### Buying Power Index

For each geographic area, **Demographics USA** presents four Buying Power Indexes.

This term, first used in the Survey of Buying Power in 1948,is widely used and accepted by businesses today. Simply put, a Buying Power Index (BPI) is a measure of a given market's ability to buy, and is expressed as a percentage of the total U.S. potential (100%). A market can be a state, region, county, metropolitan area or TV coverage area (ADI).

The basic BPI is created by weighting and combining three significant factors that exist in every market and determine its ability to buy: total population, total income, and total retail sales. Thus, the BPI is a percentage (not an index number) representing the share of buying potential in a specific market as related the U.S. potential as a whole. It is a combination of the numbers of people who can purchase the product or service; their ability to pay for it and their access to outlets where the transaction can be made. Logical, simple, concise.

### Graduated Buying Power Indexes

Take the BPI concept one step further. The Graduated BPI's correlate product potential and buying power in households with low incomes (under $15,000). moderate incomes ($15,000-$34,999), or high incomes ($35,000 and over). In this manner, more finite BPI's can be determined by relating to the price point of a product (EPP, Economy-Priced Product; MPP, Moderate-Priced Product; and PPP, Premium-Priced Product).

## YOUR OWN CUSTOM BPI

For those who need to define their markets more specifically, however, it is possible to construct a customized version of the BPI, using any of the subclassifications of statistics in Demographics USA's three basic data fields. By selecting a Demographic component (population), an Economic component (income), and a Distribution component (retail sales), you can use the formula outlined below to convert data from individual markets into a custom BPI for your product or service.

For our purposes, we will label these three BPI components as follows: Demographic = **A**; Economic = **B**; and Distribution = **C**. Looking at each of these areas individually, here's how you might go about selecting them:

**A: Demographic** - First of all, you'll need to isolate the population or household-related factor that best describes your "ideal" consumer. For example, if you're selling video games, the 18-and-under age segment is a better indicator of market potential than total population. On the other hand, if your product is media-oriented (magazines, mail-order catalogues, etc.), you may want to use household counts as your demographic component.

**B: Economic** - The next step involves selecting the income group(s) best suited to your product. Here, Demographics USA offers you eight basic ranges of household incomes, and you can easily combine two or more groups to achieve a broader spectrum of potential. For example, if you're selling a premium-priced product, you might select households with incomes of $50,000 and above.

**C: Distribution** - Isolating a particular store group that parallels your preferred channel of distribution is the final step in the preliminary selection process. If you're selling beer, for example, you may want to combine Eating & Drinking Place sales and Food Store sales, since these are the two largest markets for your product. On the other hand, if you're selling shampoo, Drugstores and General Merchandise stores (which includes department stores and discount stores) would be a better distribution-related indicator.

Once these three factors have been selected, you can then compute your custom BPI by following this simple four-step process:

**Step 1** - For each market (region, state, metro, county, etc.), you'll first need to compare local activity to that for the U.S. as a whole, producing a ratio for each of the three BPI factors (**A**-**B**-**C**). In this example, the Demographic component (**A**) would be calculated as follows:

Market's Pop. Under 18 = X% of
U.S. Pop. Under 18

Next, using households with EBIs of $35,000 and above as the Economic factor (**B**), we compare the market with the appropriate U.S. total:

Market's Hshlds. w/EBIs $50,000+ = Y% of
U.S. Hshlds. w/EBIs $50,000+

And finally, we calculate the Distribution component (**C**) by constructing a ratio of local Food Store sales to U.S. Food Store sales:

Market's Food Store Sales = Z% of
U.S. Food Store Sales

**Step 2** - Armed with these percentages (X-Y-Z), we are now ready to assign weights to the demographic, economic, and distribution-related components, according to their perceived importance in the selling process. In all cases, the assigned weights should be expressed in decimals (50% = .5, 30% = .3, etc.).

Since income is often cited as the most important indicator of potential purchasing power, your weighting of these factors might look something like this:

Factor **A** (Demographic) - .2 (20%)
Factor **B** (Economic) - .5 (50%)
Factor **C** (Distribution) - .3 (30%)

**Step 3** - Multiplying each component ratio (X-Y-Z) by its appropriate weight and adding the resulting totals will then give you the BPI for a particular market:

(.2 x X%) + (.5 x Y%) + (.3 x Z%) = BPI

The fractional figure you arrive at can then be used as a relative indicator to compare the potential buying power of this market to that for the U.S. as a whole (U.S. = 100.0000.)

**Step 4** - Repeat this same procedure for each targeted market, compiling a list of markets ranked according to their BPIs. If your particular product warrants the construction of a BPI with only two factors (or possibly four or five), remember that the same principles apply in terms of weighting the various components. In other words, the percentages should still total 100%, regardless of the number of BPI components.

## EFFECTIVE BUYING INCOME

Effective Buying Income (EBI) is disposable personal income: that amount of gross income available after taxes, to purchase goods and services. The Effective Buying Income household distribution groups households into income classifications and geographic market detail. All are included in DEMOGRAPHICS USA.

## RETAIL SALES

Within these same geographic market areas, information and rankings also exist for Retail Sales, covering nine basic retail store groups: food stores, eating and drinking places, general merchandise stores, apparel and accessories stores, furniture/home furnishings/appliance stores, automotive dealers, gasoline service stations, building and hardware dealers.

## MERCHANDISE LINE CATEGORIES

Merchandise Line Sales data reflect product sales rather than store sales. Merchandise Line categories include groceries and other foods, drugs and other health aids, furniture and sleep equipment, major household appliances, televisions, audio equipment, men's and boys' clothing, women's and girls' clothing, footwear and toiletries. In many cases these measurements provide more specific estimates of product potential than is provided by store type sales alone.

## THE PURPOSE OF THIS GUIDE

Because DEMOGRAPHICS USA is an analytical tool, its value is directly related to your understanding of its capacity to provide answers to problems.

The function of this GUIDE is to help you take advantage of what is in the 900 plus page DEMOGRAPHICS USA; to enable you to relate your own special problems to the solutions that are to be found within its pages. And to provide you with simple effective procedures for cutting through its mass to develop and use the valuable answers it contains.

## HOW THE GUIDE IS ORGANIZED

This User's Guide has been divided into three basic sections: Sales, Marketing, and Advertising. Each one offers a sample of applications that can be expanded upon according to your specific needs. To acquaint yourself with the Survey, locate the appropriate section that relates to your industry and take a minute to read through the outlined procedures. The examples provided will get you started toward generating the information and answers you require.

# SALES PLANNING APPLICATIONS

## A. MEASURING SALES PERFORMANCE

How do you determine how well your sales force is doing? Is a salesperson who exceeds quota by 20% really performing better than someone who may have only achieved last year's projected levels? The answer isn't as simple as you might think, since it involves a number of other factors, not the least of which is the statistical makeup of the territory itself. To sort through these complexities, you're going to need an objective measurement of performance, and this is where DEMOGRAPHICS USA can help.

Research on buying trends has indicated that consumers with the same *demographic* and *economic* profiles—and with access to similar channels of *distribution*—will normally buy the same quantity and quality of product. However, finding a way of equitably comparing markets based on these three factors is not an easy task, and this is where S&MM's Buying Power Index, or BPI, is most valuable.

By combining total population, income, and retail sales data—and assigning appropriate weights to each of these factors—a BPI is produced that charts the potential of a particular metro, or county relative to the U.S. as a whole (U.S. = 100.0000). And because the BPI compares all markets equitably, it can also be used as an indicator of sales potential through the construction of a Performance Index (PI).

To calculate a PI, simply take your annual sales—in this case we'll use 1 million pairs of shoes—and multiply that figure times the BPI for a particular market. Using the New York metro market as an example (BPI = 3.4639), this gives you a total of 34,639 pairs of shoes, which becomes the Sales Measurement (SM) for this particular territory.

This figure can be broken out further by utilizing the BPIs for the various counties that make up the New York market, which will in turn reveal the specific geographic areas where sales are lightest and heaviest. Once the Sales Measurement figure has been calculated, a Performance Index for the market (or any of its components) can then be constructed.

Continuing with this same example, if it is determined that actual sales in this market totaled 50,000 pairs of shoes, you divide actual sales by the SM figure, according to the following formula:

$$\text{PI} = \frac{\text{Actual Sales}}{\text{Sales Measurement}} \quad \text{or:}$$

$$\text{PI} = \frac{50{,}000}{34{,}639}$$

which equals: PI = 1.44, or 144.

Since the Performance Index for the New York metro is greater than 100, this indicates that actual sales in this market exceeded those shown by the Sales Measurement figure by roughly 44%. However, if the PI figure turns out to be less than 100, this indicates that there is room for improvement. Of course, your product may be a bit more complicated than shoes, in which case you'll want to construct a custom BPI for calculating the Sales Measurement portion of your PI. For example, if you're selling a more specialized product, like running shoes, your market is much more limited than that for shoes in general.

## B. SETTING SALES GOALS

If you've found that the BPI works for your particular product or service, or if you've constructed your own custom BPI, you can then use that figure to set goals for your salespeople in their individual territories.

Using the same example as in the previous section, if you're planning on increasing production by 10%—to 1.1 million pairs of shoes, don't simply add 10% to your actual New York sales of 50,000. Instead, go back and multiply the BPI by your new target figure of 1.1 million, which gives you a revised goal of 38,103.

Since you already know that sales in this market are 50,000, you can safely assume that even if there is little or no change in New York's level of performance, sales will exceed the goal for the coming year. This leaves you free to concentrate your efforts on weaker markets, and at the same time it doesn't penalize your New York salespeople for doing a better-than-average job.

Now let's move on to another example, looking at a product with a completely different kind of sales-related problem.

Let's say that your company sells briefcases. From your experiences in this market, you know that young adults buy proportionately more briefcases than older people. Therefore, by locating areas where the age mix of the population is above or below the national average, you can isolate the markets where your prospects are best. A typical example of this kind of situation occurs in the state of Florida.

The Sarasota metro area, with a relatively good-sized population of 282,700, has a median age of 48.9 years, compared with a U.S. average of 29.4. On the other hand, the median age in the Tallahassee metro (which is nearly the same size as Sarasota) is only 29.2. However, if all we look at are the BPIs for these two markets, we might assume they're not that dissimilar, since Sarasota's BPI of .1334 is only slightly higher than Tallahassee's .0914.

For a company selling briefcases, the obvious solution is to construct a custom BPI utilizing median age as the demographic component rather than total population, and possibly selecting a narrower income group, say $35,000-$49,999, as well as a more specific distribution channel (Department stores), making sure that these factors are weighted according to their relative importance.

## C. SETTING SALES QUOTAS

What is a fair quota? Basically, it can be defined as one that offers a realistic opportunity of being accomplished, as well as including the possibility of special awards for truly superior performance. In any case, fair does not always mean equal, since no two organizations deal with the same set of problems or challenges in the same way. But by utilizing the data in DEMOGRAPHICS USA , you can develop a basic quota-setting system that can be easily altered to meet the specific needs of your product or service.

As a point of departure, assume that a fair quota is an achievable one, although any quota-setting procedure should first consider the individual salesperson. In other words, you must be able to evaluate past performance as part of the process. In addition, this same quota should realistically reflect the volume of goods or services that management believes can be sold in a given territory. In short, only a quota system that incorporates both experience and potential can truly be called fair.

As an example, let's take a company that manufactures tennis rackets with a national sales goal of 550,000 units. According to its own custom BPI, the figure for the Washington, DC, market is 2.3962, which translates to a quota of 13,179 units in this metro.

However, based on sales from the previous year, Washington has been shown to have a Performance Index of 118, which means that it is already above average in terms of its share of national sales. But a review of the territory's actual geographic boundaries reveals that—in addition to the Washington, DC, metro area—it also includes several counties in Virginia (Fauquier, Culpepper, Orange, Spotsylvania, Caroline, and King George) that are not part of the metro, some of which (Orange and Caroline) recorded no sales at all last year. In addition, since there are a number of cities in Virginia that are considered independent counties, the city of Fredericksburg must also be added to the territory. What this means is that custom BPIs for these outlying counties must also be calculated (even though some did not contribute to overall sales) and added to that of Washington, which results in a total BPI of 2.5337, with the Performance Index changing to a more modest 101.

As you can see, setting a quota for the Washington, DC, territory meant looking at the *total* geographic area, not just at the core metro where sales are the highest.

Finally, setting sales quotas also means assigning each part of a territory its rightful share of the total selling effort. If the index for a particular area proves to be below par (under 100), then it must be brought up to its proper level of performance via a carefully planned annual increase that does not overstate reality. Remember, to expect such a change to occur in the course of a single year might be asking more of your salespeople than they can legitimately handle.

## D. TERRITORY ANALYSIS

Sales territories are all too often designated according to historical record rather than by an objective analysis of potential or performance. Through the use of DEMOGRAPHICS USA data, however, management is afforded the opportunity to undertake an objective process that identifies and meets territorial needs.

The first step is to utilize the aforementioned method of measuring territories for their sales potential. Ideally, all territories should have approximately the same collective BPI, either regular or custom.

One of the functions of management is to know whether there is a major buying office in a particular territory, and if this is the case, that factor needs to become part of the BPI equation for that territory (as well as for any surrounding territories).

Say you're the sales manager for a new product line being introduced by an existing company. The line consists of men's clothing, and up to this point, your company was selling only women's clothing. Since you'll be starting from scratch with a separate sales force, you'll first need to establish your sales territories. Your initial budget allows for the hiring of 12 salespeople, and with this in mind, you now need to decide where your territory boundaries should be drawn for the best possible coverage.

In DEMOGRAPHICS USA, you'll find metro market rankings for Men's and Boys' Clothing sales, which should help you identify the top markets for your initial effort. By creating a custom BPI for your product, you can then identify the size of the territory you'll want covered by each individual salesperson. By doing this, you'll eliminate the necessity for cutting back on territories later on, while at the same time getting the maximum effort from each of your salespeople, since they'll be concentrating on an achievable, workable territory that has been efficiently planned.

# MARKETING APPLICATIONS

## A–MEASURING MARKET POTENTIAL

In order to make the most efficient use of DEMOGRAPHICS USA in a marketing situation, the first thing you need to do is identify your markets and territories in a manner that's consistent with DEMOGRAPHICS USA's geography. Markets can be identified at a number of different levels—regions, states, metros, ADIs or counties.

In addition to this, company sales records should be structured in such a way as to provide information that can be used to measure market potential. In other words, your internal data must conform to one or more of the above mentioned geographic configurations.

Having acquired such information, DEMOGRAPHICS USA can then be used to measure potential by following a simple five-step procedure:

1. Identify a particular geographic segment.
2. Identify the industry/product sales for that market through the use of a standard or custom BPI.
3. Identify your actual sales in that market.
4. Calculate your share of market by dividing item No. 2 by item No. 3.
5. Identify the potential for a particular market by multiplying total sales by the market's BPI.

With this figure now in hand, divide it into your actual sales for the market, which will produce an index of market performance. An index figure of 100 is considered par. If the figure is greater than 100, this means that a market is performing above its potential. If it's less than 100, this indicates below-average performance. For example, an index figure of 80 means that a market is performing at 20% below par or potential.

In a nutshell, here's how it works: You're a manufacturer of men's dress shirts. Retail volume for the industry as a whole is $2 billion, nationwide. Your company sales are $140 million, or 7% of the market in terms of dollar volume. In the Indianapolis metro, your sales are $542,300. The custom BPI for this market is .3303.

The first thing you want to do is find out what the estimated industry sales for Indianapolis should be. Here, you multiply the BPI by total industry sales (.3303 X $2 billion = $6,606,000). Next, your basic potential in this market is calculated by multiplying your company's total sales ($140 million) by the custom BPI for Indianapolis (.3303), which equals $462,420. The final step then involves the construction of a Performance Index (PI), taking actual market sales ($542,000) and dividing it by potential sales ($462,420), which equals 117, indicating that sales in this market are 17% above the estimated potential.

## B. DEVELOPING MARKETING STRATEGIES AND DISTRIBUTION CHANNELS

As a manufacturer of a medium-priced single lens reflex (SLR) camera, let's assume that you've defined your core customer base as the 25-49-year-old age bracket—those with household incomes of $35,000 or more. In addition, because this camera is easy to operate and carries a competitive price point, it's going to be sold in general merchandise stores (department stores and discount stores), as well as in camera shops—a major departure from your previous marketing strategy.

This decision was based on test marketing that showed that sales in general merchandise stores should easily surpass those in camera shops, and since access to camera stores used to be the primary distribution-related component in your custom BPI, changes need to be made that reflect this shift in distribution.

In the past, dependency on camera stores as a main channel of distribution necessitated a national advertising campaign, and as part of the review of this strategy, a list of targeted markets and their combined coverage needs to be produced to see if this will still be necessary.

The first step involves searching out key concentrations of consumers that fit the aforementioned age and income profiles and then producing a new custom BPI based on general merchandise store sales as the distribution component. This results in the following list of metros, ranked by their new custom BPIs (which have been approximated for this example):

| **METRO** | **CUSTOM BPI** | **METRO** | **CUSTOM BPI** |
|---|---|---|---|
| San Jose, CA | 10.92 | Seattle, WA | 4.36 |
| Washington, DC | 8.96 | Denver, CO | 4.11 |
| Brazoria, TX | 7.08 | Atlanta, GA | 4.02 |
| Anchorage, AK | 5.95 | Houston, TX | 3.92 |
| San Francisco, CA | 5.82 | Dallas, TX | 3.38 |
| | | **10-Market Total** | **58.52** |

What you find is that more than half your potential market is concentrated in these 10 metros, and when you add in the BPIs for the next 10 markets, coverage is increased to just under

75%. This means that advertising can now be concentrated within these markets without conducting a blanket campaign.

Targeted sales for the coming year have been set at 200,000 units, and by using the custom BPI you've constructed, you can easily see what share of sales each market will comprise.

## C. EVALUATING NEW PRODUCT POTENTIAL

Say your company has created a new product that is aimed at lower-income consumers. All of your previous experience has been with the affluent market, and this is a relatively unknown world to you. How do you define and reach this new category of buyers? Using DEMOGRAPHICS USA, you can put together a strategy that will help you identify consumers that fit your particular profile, locating markets with high concentrations of households having Effective Buying Incomes (EBIs) between $10,000 and $19,999. Once this has been done, you can establish age and distribution criteria that will help you construct a custom BPI for your product.

After laying the basic groundwork, you can then assign specific goals to your sales personnel in preselected sales areas that encompass the highest concentrations of potential customers with the characteristics you seek. This will allow you to establish, with solid objectivity, maximum sales goals in these market areas, knowing in advance that they represent an optimum concentration of the best potential customers for your new product.

For example, let's say you're currently selling a top-of-the-line, quality raincoat. Your market is secure, but it's been somewhat limited by the product's premium price. Therefore, you've decided to introduce a lower-priced "knockoff" version of the raincoat, designed to appeal to the same age segment as your premium-priced model but aimed at consumers with smaller household incomes.

The first thing you need to do is use your own internal data to identify those markets where raincoats will sell best. Remember; Los Angeles may be one of the biggest markets in the country in terms of size and spending power, but raincoats aren't going to be a particularly hot item in L.A. Here, your own savvy and sales history will tell you which markets are best.

What DEMOGRAPHICS USA will then allow you to do is compare demographic and socioeconomic information on your potential customers on a market-by-market basis. If New York is currently the top market for your premium-priced product—your primary target being consumers with household incomes of $50,000 or above—then this market will grow substantially when you add the $10,000-to-$34,999 categories.

If part of your evaluation of new product potential includes a controlled market test, this same technique will allow you to identify areas that conform to your profile of the ideal product/customer relationship and will also let you implement controlled testing in these additional markets. You will then be able to compare the results of these market/product associations at the end of the test period, and by using the data from DEMOGRAPHICS USA, the results will be both accurate and projectable.

# ADVERTISING APPLICATIONS

## A. TEST MARKET SELECTION

One of the most valuable aspects of DEMOGRAPHICS USA is its usefulness in selecting test markets. Unfortunately, most marketers have a tendency to stick to test markets that have been used previously, or those that are famous as test markets (i.e., "How will it play in Peoria?"). Using the demographic, economic, and distribution-related data in DEMOGRAPHICS USA, however, markets with similar characteristics can be identified and categorized according to a wide range of test-marketing purposes.

Similarities in total population, age groups, households, and income can all be used as relative indicators, as we can see in the following example, which groups four markets with roughly the same populations:

| METRO | POPULATION |
|---|---|
| Sacramento, CA | 1,532,300 |
| Milwaukee, WI | 1,436,800 |
| Columbus, OH | 1,389,700 |
| San Antonio, TX | 1,324,000 |

Comparisons can also be made using such specialized measurements as median household EBI or the Buying Power Index. Under this magnifying glass, our four examples would look like this:

| METRO | MEDIAN HOUSEHOLD EBI | BPI |
|---|---|---|
| Sacramento | $31,903 | .6556 |
| Milwaukee | 33,549 | .6239 |
| Columbus | 27,185 | .5542 |
| San Antonio | 23,865 | .4723 |

In terms of population, Sacramento, Milwaukee, Columbus, and San Antonio are very nearly the same, ranking within seven places of each other nationally. When looked at in the second table, however, we see that they're separated by a wide margin in terms of household income, placing 50th, 31st, 151st, and 240th, respectively. On the other hand, BPI figures show them once again to be fairly similar, which only goes to show that each market can be clearly identified according to its differences and similarities, depending on which indicator(s) is deemed most important to its selection. The use of these data is indicated when raw population numbers are not necessarily relevant to the sales growth of a particular product. By utilizing appropriate clusters of retail sales statistics, you can match up any and all metro areas that sell approximately the same volume of product:

| METRO | PER HOUSEHOLD RETAIL SALES | FOOD STORE SALES |
|---|---|---|
| Sacramento | $20,045 | $2,309,094 |
| Milwaukee | 20,792 | 1,976,948 |
| Columbus | 19,961 | 1,700,547 |
| San Antonio | 19,960 | 2,069,362 |

Once again, it becomes clear that there are major differences within these four markets that would preclude them from being similar test markets for all products.

Since we've established that a particular combination of known demographic, economic, and distribution factors determine sales potential—regardless of the geography of the area in question—this means that you can construct a wide variety of test market universes by zeroing in on the specific characteristics that affect the rate of sales of your particular product.

Basically, you're no longer forced to choose test markets from someone else's list of metros. As a result, you can avoid any competitive testing that might skew your results and require reevaluation (assuming that you're fortunate enough to find out that such factors have affected your results in the first place).

By knowing with objective certainty the combination of available characteristics that will positively affect your sales, you can create your own test markets with a maximum amount of control, projectability, and dollar efficiency. When you come right down to it, there really isn't an "average" product, any more than there is an "average" test market, unless you happen to be the first one on your block to discover such a market. By the same token, if you're just another in a long line of users of a given test market, be aware that inordinate testing could eventually destroy the natural responsiveness of such a market—the very thing that made it valuable as a testing location in the first place.

## B. CO-OP ADVERTISING ALLOCATION

One of the biggest problems in the creation of a co-op advertising budget involves trying to define the approximate dollar amounts that should be targeted for certain markets. The main source of this dilemma is that most co-op allocations are based on after-the-fact sales volume figures, with a percentage of total sales then set aside for the co-op program.

Once again, DEMOGRAPHICS USA can be used to identify sales potential by market area, which then makes it possible to allocate co-op dollars based on projected sales quotas rather than actual sales. In effect, you can then use these all-important ad dollars to help your salespeople generate sales, rather than as a payment to dealers who have already made a commitment to buy.

In the following example, we'll look at a manufacturer of stereo components that sells, on the average, one unit for every 500 people between the ages of 25 and 34. In the state of Michigan, sales last year totaled only 2,983 units, even though the potential market in this age segment was 1,561,112, or 3,122 potential unit sales. With each unit carrying a price tag of $80, the actual accrual of co-op funds—based on a program base of 5%—was $11,932.

Based on market potential, however, sales should have totaled $248,960, and the 5% accrual would have generated $12,448 in co-op funds. By planning the program based on this potential rather than on actual sales, you can assist your salespeople in achieving their expected volume.

Through the construction of a custom BPI, you could use your anticipated national sales volume to identify the proper share of that figure that should be generated by all targeted markets or groups of territories, and then allocate co-op dollars to those markets to help them achieve their potential sales volume.

## C. MEDIA ALLOCATIONS

Many consumer-goods manufacturers purchase TV, radio, magazine, and newspaper advertising for their products. Basically speaking, the greatest efficiency is achieved by reaching the most people with the least expense. This works well when the distribution of the product is widespread and if it appeals to a large segment of consumers.

However, if the product is a specialty item, a national advertising program that does not adequately reflect differences in market potential will only deliver audiences, not customers. The difference between the two is critical to sales success. Metro market ranking tables are provided so that key markets can be flagged and determinations made as to the best buy for a particular product.

Here again, the Buying Power Index is the ideal tool for allocating limited ad budgets in individual markets. If a market has a 6% share of potential, then a company should consider spending 6% of its budget in that market. Of course, there are some exceptions to this general rule, the main one being that some portions of the country are well developed in terms of sales, while others are still new and in need of constant attention. In cases like this, funds can be diverted from established markets to those that need expanding.

Another way this kind of situation can be handled is by creating two different ad funds, the first being a "sustaining" fund designed to maintain markets where sales are already established, and the second a "developmental" fund to assist the sales force in achieving maximum potential for underdeveloped markets. In both cases, clear goals of total sales should be written into the sales plan before any advertising monies are committed to markets.

## D. MEDIA SELECTION

More and more major corporations are taking advantage of the strategic benefits arising from the use of advertising techniques that localize expenditures on a market-by-market basis. Through the use of DEMOGRAPHICS USA, you can readily identify the sales volume of a given geographic area, which will enable you to relate this volume to your ad dollar investment.

Once a market's share of the advertising budget has been established, further use of DEMOGRAPHICS USA data can reveal the efficiency of using the various media (broadcast, print, etc.), according to the cost-per-thousand exposure to your targeted customers. In addition, if your product has specific demographics connected to it, you can adjust the basic cost-per-thousand to determine ad efficiency—based not on population but rather on concentrations of characteristics that define your primary prospects (age, income, households, etc.).

By using such data to rank markets that have the greatest numbers of key prospects, you'll be able to determine such things as whether national coverage is more efficient than local coverage. If TV advertising, for example, justifies its high cost on the basis of more exposure to your message, you can compare such coverage to a list of the top 50 markets for certain characteristics. In such cases, you might find that these top markets represent 75% or 80% of your total potential, and if this is so, nationwide coverage probably isn't justified.

In other cases, when you know that you're trying to reach a particular age group within a specific segment of high-income households, TV may turn out to be a less efficient medium for your message compared to alternatives such as cable or specialized publications that are aimed directly at your targeted customer.

## Let us hear from you...

Most of the improvements and additions that appear in this new 1992 edition of the Survey of Buying Power DEMOGRAPHICS USA are the direct result of the comments and suggestions we received from the subscribers to the previous editions.

Specifically, the listing of each county within a state in alpha order, the addition of Metropolitan Area rankings in broad range of vital categories and series of 51 county outline maps showing Metropolitan Areas for each state are all a direct result of your (or your colleagues') reaction to the past editions. As a result, the '92 edition is a more useful and usable marketing tool...and thus, more valuable to you.

The 1992 edition confirms Market Statistics and Sales & Marketing Management's commitment to continuing its long history of providing the marketing and sales community with the information it needs to achieve sophistication and precision in analysis and planning.

If you have any questions, ideas or suggestions, please don't hesitate to write or call Market Statistics at (212) 986-4800.

# EXPLANATION OF TERMS

**ALL OTHER STORES.** The aggregate total of sales for all types of retail establishments not included among the store groups listed in *Demographics USA.* The arithmetic difference between Total Retail Sales and the aggregate sales of the 9 major store types shown in *Demographics USA* represents the sales of "All Other Stores." Such outlets include nonstore retailers (vending machines, for example), liquor stores, sporting goods dealers, hobby stores, book, gift, and stationery stores, luggage shops, florists, cigar stands, and news dealers and newsstands.

**APPAREL AND ACCESSORIES STORES** (SIC Major Group 56). This category includes sales for establishments primarily engaged in selling new clothing, shoes, hats, underwear, and related articles. It is a broadly inclusive group that—aside from men's and women's clothing and accessory stores—also encompasses children's and infants' wear stores, bridal shops, furriers, handbag stores, lingerie stores, custom tailors, and sports apparel stores. However, apparel and accessories sold in Department and General Merchandise stores are not included.

**AUTOMOTIVE DEALERS** (SIC Major Group 55; excluding subgroup 554, Gasoline Service Stations): Included are retail outlets selling automobiles—new and used, domestic and imported. In addition to these categories, sales for auto and home supply stores (tire dealers and parts and accessories stores), boat dealers, recreational vehicle dealers, motorcycle dealers, and miscellaneous automotive dealers selling aircraft, dune buggies, snowmobiles, and utility trailers are also included.

**AVERAGE HOUSEHOLD EFFECTIVE BUYING INCOME.** This figure is calculated by dividing the total number of households into total EBI for a given geographic area. Often used as an indicator of market quality, this figure can nonetheless be misleading, particularly in areas where there is a disproportionate share of college, military, or other institutional-style populations housed in group quarters. Since such quarters are not considered households, and because total EBI includes the incomes of these residents, a per-household average sometimes credits households with income that is not really theirs. (See Effective Buying Income and Median Household EBI.)

**AVERAGE HOUSEHOLD SIZE.** Total population divided by the number of households. Depending upon whether it is above or below the U.S. average, it is used as a rough indicator of the relative importance of family-type units or single-person units in a local area. However, the figure can be artificially high in those relatively few counties where there is a disproportionate share of college, military, and other types of institutional population. The people living in such group quarters are part of the population total, but their dwellings are not part of the household total.

**BUILDING MATERIALS, HARDWARE DEALERS** (SIC Major Group 52): Sales in this category include those from establishments primarily engaged in selling hardware, lumber, and other building materials; paint, glass, and wallpaper; lawn and garden supplies; and mobile homes, even if sales to contractors account for a larger proportion of all sales.

**BUYING POWER INDEX (BPI):** A weighted index that converts three basic elements—population (the demographic factor), Effective Buying Income (the economic factor), and retail sales (the distribution factor)—into a measurement of a market's "ability to buy," expressing it as a percentage of the national total (100.0000%). The BPI is calculated by first producing a ratio of local population, income, and retail sales to the comparable U.S. totals, then assigning a weight of .5 to an area's income; .3 to retail sales; and .2 to population. These weights are then multiplied by the appropriate ratios and the resulting figures added together to produce the BPI for a state, metro, or county.

The BPI is one of the most important measures used to estimate potential for mass-marketed items sold at popular prices.

**CONSOLIDATED METROPOLITAN STATISTICAL AREA (CMSA).** (See Metropolitan Statistical Area).

**COUNTY.** The primary political administrative subdivision of a state, the county is widely used for marketing purposes for the following reasons: 1) The range of current available data below the state level is greatest at the county level. 2) Geographic boundaries are rarely altered. 3) Complete national coverage is achieved by adding all counties. 4) Sales & Marketing Management's 3,140 county units are manageable building blocks for alignment of sales territories. 5) County boundaries are readily identifiable.

For Louisiana, parishes are used in lieu of counties; for Alaska, boroughs and census divisions. The District of Columbia is treated as a single county unit. In Virginia, all cities are by law independent of counties; hence, the S&MM *Demographics USA* treats them as county units in themselves. The cities of Baltimore, Md., St. Louis, Mo., and Carson City, Nev., are also independent.

**DENSITY.** Population divided by the county's square miles of land area. A simple basis for relating population to a county's size. Thus two counties with the same population can have sharply divergent densities because of difference in land area size. The figure suffers because the land area will include railroad freight yards, wildlife preserves, industrial parks, and other nonresidential areas, resulting in a misleading density level.

**DEPARTMENT STORES** (SIC Subgroup 531). A department store is an establishment that employs 50 or more persons and has combined sales of soft goods and apparel totalling at least 20% of sales. Furthermore, the establishment must sell minimum amounts of 1) furniture, home furnishings, appliances, radios and TV sets; 2) a general line of apparel; 3) household linens and dry goods. So-called mass merchandisers and discount stores are included if they meet the above criteria. Department stores are included in the General Merchandise Stores sales totals.

**DRUGSTORE SALES** (SIC Industry Group 591). A 3-digit subgroup of SIC 59—Miscellaneous Retail Stores. Totals here reflect sales from establishments engaged in the retail sale of prescription drugs, proprietary drugs, and nonprescription medicines. Stores in this category may also carry a number of related lines, such as cosmetics, toiletries, tobacco, and novelty merchandise, and sales include drugstores that also operate soda fountains or lunch counters.

**EATING AND DRINKING PLACES** (SIC Major Group 58). Includes establishments selling prepared foods and drinks for consumption on the premises or for takeout, as well as lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption. Also included under Eating Places are caterers and institutional food services; concession stands at stadiums, amusement parks, and airports; fast-food restaurants and custard stands; and pizzerias, oyster bars, commissaries, and other miscellaneous eating establishments. Drinking Places include bars, beer gardens, cocktail lounges, discos serving alcoholic beverages, nightclubs, taprooms, wine bars, and other miscellaneous establishments.

**EFFECTIVE BUYING INCOME (EBI):** A classification developed exclusively by Sales & Marketing Management to distinguish it from other sources reporting income statistics, EBI is defined as personal income less personal tax and non-tax payments—a number often referred to as "disposable" or "after-tax" income. Income and all income-related fields have now been benchmarked to the 1990 Census.

Generally speaking, EBI is a bulk measurement of market potential indicating the ability to buy, and it is essential for selecting, comparing, and grouping markets on this basis. For products that appeal to more specific income classes, marketers should examine data showing the Percentage of Households by EBI Group and the Buying Power Index (BPI).

Personal income is the aggregate of wages and salaries, other labor-related income (such as employer contributions to private pension funds), proprietor's income, rental income (which includes imputed rental income of owner-occupants of non-farm dwellings), dividends paid by corporations, interest income from all sources, and transfer payments (such as pensions and welfare assistance).

Deducted from this total are personal taxes (federal, state, and local), non-tax payments (fines, fees, penalties, etc.), and personal contributions to social insurance. According to U.S. government definitions, the resultant figure is commonly known as "disposable personal income."

**FOOD STORES** (SIC Major Group 54). Retail stores primarily engaged in selling food for home preparation and consumption. Included in this category are grocery stores; meat and fish markets; fruit and vegetable markets; candy, nut, and confectionery stores; dairy products stores; bakeries; and miscellaneous food stores such as health food, coffee, spice, vitamin, and poultry stores.

**FURNITURE, HOME FURNISHINGS, AND APPLIANCE STORES** (SIC Major Group 57). Sales from a broad array of subgroups including furniture stores; floor covering stores (carpet, rug, and tile); drapery, curtain, and upholstery stores; home furnishing stores (bedding, china, cookware, lamps, pottery, venetian blinds, etc.); and household appliance stores (air conditioners, freezers, sinks, cabinets, stoves, refrigerators, and vacuum cleaners). Perhaps the most important subgroup, however, is that of radio, television, consumer electronics, and music stores, which includes computer and computer software stores as well as record and tape stores.

(See Supermarkets, sales of which are included in Food Stores totals.)

**FURNITURE, HOME FURNISHINGS STORES** (SIC Subgroup 571). A component of Furniture, Home Furnishings, and Appliance Stores category. Made up of furniture stores as well as floor covering stores, and drapery, curtain, and upholstery stores. Diversified furniture stores that also sell household appliances, phonographs, radios and TV sets, and floor coverings are in this group if their sales of furniture and sleep equipment exceed sales of all other merchandise. Establishments engaged primarily in repairing and reupholstering furniture are included in the *Census of Selected Services;* hence their data do not appear in *Demographics USA.*

**GASOLINE SERVICE STATIONS** (SIC Industry Group 554). This 3-digit subgroup of SIC Major Group 55—Automotive Dealers—is broken out separately due to its marginal relation to actual car and automotive accessory sales. It is defined as service stations primarily engaged in selling gasoline and oil, although these establishments frequently sell other merchandise such as tires, batteries, and parts, as well as engaging in minor repair work. Gas stations combined with other activities such as grocery stores, convenience stores, or car washes are classified according to their primary activity.

**GENERAL MERCHANDISE STORES** (SIC Major Group 53). This category includes retail stores that sell a number of lines of merchandise, such as dry goods, apparel and accessories, furniture and home furnishings, housewares, hardware, and food. Stores included in this group are department stores, limited-price variety stores, and miscellaneous general merchandise stores such as general stores and catalogue showrooms, although catalogue and mail-order operations are not included in this category.

**GRADUATED BUYING POWER INDEXES.** Designed to correlate product potential and buying power of households with LOW income (under $15,000), MODERATE income ($15,000-$24,999), or HIGH income ($25,000 and over). EPP, for economy-priced products, has the following weights applied to the respective percents of U.S. totals: 6 for households with incomes under $15,000, 3 for food store sales, and 1 for number of households. MPP, for moderate-priced products, has the following weights: 6 for households with incomes $15,000-$24,999, 3 for total retail sales, and 1 for three- and four- person households. PPP, for premium-priced products, has the following weights: 6 for households with incomes of $25,000 and over, 3 for combined Apparel and Furniture-Appliance store sales, and 1 for households with head 35-64 years old.

Each Index is calculated in the same manner as the more familiar Buying Power Index (BPI). That is, the market's share of the U.S. total of each indicator is multiplied by the given weight; the total of the weighted percent is then divided by 10. The reader can construct his own customized BPI if he has reliable data on the consumers of his products.

**HOUSEHOLDS.** A household consists of all the people occupying a single housing unit under the 1990 Census rules. A housing unit is defined as a house, an apartment, a group of rooms, or a single room. In addition, the members of a household need not be related, and a single person living alone in a housing unit is also considered a household.

Persons who are not counted as members of households include: those living in group quarters such as institutions, college dormitories, or military barracks; hospitals; and nursing homes.

**HOUSEHOLDER.** *Demographics USA* follows the 1990 census definition of householder. In accordance, a householder is the person who was reported in column 1 on the 1990 census questionnaire. This was to be the person or one of the persons in whose name the home was owned or rented. If there was no such person, any adult household member at least 15 years old who was not a roomer, boarder or paid employee was to be reported in this column.

**HOUSEHOLDS BY AGE OF HOUSEHOLDER.** Marketers often try to position their products or services against specific age groups. *Demographics USA* breaks the household total into six widely used age groups.

**HOUSEHOLDS BY EFFECTIVE BUYING INCOME GROUPS.** A household's available spending potential is also used by marketers who want to aim their products or services and advertising efforts at those most likely to buy. *Demographics USA* breaks the household total into the eight most widely used income groups.

**HOUSEHOLDS BY NUMBER OF PERSONS.** A third household break that is widely used by marketers who seek more precise sales targets is size, or number of persons in the household. Theoreotically, for instance, a large household will consume a mass staple at a faster rate than a small one, giving the marketer an insight into the expected repeat-purchase rate. *Demographics USA* breaks the household total into the six most widely used size categories.

**INDEPENDENT CITIES.** Several cities in the U.S. that do not fall within official county boundaries are treated as independent entities by the Census Bureau. *Demographics USA* lists those independent cities as county entities. Except for St. Louis, MO,; Baltimore, MD,; and Carson City, NV, which replaced Ormsby County, all independent cities are located in the state of Virginia. These are Alexandria, Bedford, Bristol, Buena Vista, Charlottesville, Chesapeake, Clifton Forge, Colonial Heights, Covington, Danville, Emporia, Fairfax, Falls Church, Franklin, Fredericksburg, Galax, Hampton, Harrisonburg, Hopewell, Lexington, Lynchburg, Manassas, Manassas Park, Martinsville, Newport News, Norfolk, Norton, Petersburg, Poquoson, Portsmouth, Radford, Richmond, Roanoke, Salem, South Boston, Staunton, Suffolk, Virginia Beach, Waynesboro, Williamsburg, and Winchester.

**MEDIAN AGE OF POPULATION.** A calculation that divides the age distribution of the population into two equal groups, with one-half of the population older, and one-half younger, than the figure shown.

**MEDIAN HOUSEHOLD EFFECTIVE BUYING INCOME:** This calculation takes the household distribution of Effective Buying Income, or EBI, and divides it into two equal groups, with half the households above, and half below, the resulting figure.

**MERCHANDISE LINE SALES.** These data show total sales on nine broad product categories, such as groceries and the other food products, footwear and so on. Merchandise line totals are becoming increasingly popular because they give a more realistic estimate of a product's area potential than is provided by store-type sales. The merchandise line totals are made even more useful by data that show the volume of individual product categories sold by the dominant store type for that product classification–for example, the dollar volume of groceries sold in food stores. The merchandise line estimate shown in *Demographics USA* are based on the 1987 Census of Merchandise Line.

**METROPOLITAN STATISTICAL AREA (MSA).** According to the government's three-tiered system of metropolitan area definitions, an MSA is a geographic area with a large population nucleus, along with any adjacent communities that have a high degree of economic and social integration with that nucleus. The major purpose of this system—which also includes PMSAs and CMSAs—is to enable federal agencies to use the same geographic definitions when collecting and disseminating metro-area statistics. These definitions are reviewed every 10 years (as part of the decennial Census of Population), although metro areas are sometimes added to the government's listings between census years. However, any such additions have always been based on strict adherence to government criteria.

The metro area definitions are based on the most recent revisions to this system, which were made just after the completion of the 1980 census. The most important change effected by these revisions was the elimination of the term Standard Metropolitan Statistical Area, or SMSA, which has been replaced by a two-tiered system of definition: Metropolitan Statistical Areas (MSAs) and Primary Metropolitan Statistical Areas (PMSAs). The third tier in the revised system—CMSAs, or Consolidated Metropolitan Statistical Areas—is virtually the same as the old SCSA (Standard Consolidated Statistical Area) designation, since both are made up of groups of metros rather than counties.

MSA and PMSA designations follow a set of standards prepared by the Federal Committee on MSAs, which advises the Census Bureau and the Office of Management and Budget (OMB) on metro area definitions. Under the 1980 revisions, an area can qualify as an MSA in one of two ways: 1) if it contains a city with a population of at least 50,000, or 2) if it contains an "urbanized" area of at least 50,000 and the total metro-area population is 100,000 or more. In addition to the county containing the central city, an MSA may include additional counties that have close economic and social ties to the core county.

MSAs and PMSAs are defined in terms of whole counties, except in the six New England states, where towns and cities are the standard units of definition due to the absence of county governments. In these states, the federal government's unofficial system of New England County Metropolitan Areas (NECMAs) is utilized by *Demographics USA* in order to ensure a uniform system of county-based geography.

An MSA with a population of more than 1 million may qualify for designation as a Primary Metropolitan Statistical Area (PMSA) if it is contiguous with at least one other such metro, with the resulting group of two or more PMSAs forming a consolidated area, or CMSA.

The Metro Market rankings ignore the distinctions between MSAs and PMSAs, grouping the two designations together in the interest of simplicity and consistency.

**NEW ENGLAND COUNTY METROPOLITAN AREA (NECMA).** The U.S. Office of Information and Regulatory Affairs (OIRA), part of the government's Office of Management and Budget, uses this system to define metro areas in the six New England states by applying the same criteria used in establishing MSAs in other regions. (See Metropolitan Statistical Area.)

**NONSTORE RETAILERS** (SIC Subgroup 596). Nonstore retailers include Mail Order Houses (SIC 5961), Merchandise Vending Operators (SIC 5962), and Direct (house-to--house) Selling Organizations (SIC 5963). *Demographics USA* includes sales of nonstore retailers as part of "All Other Stores."

**PER-CAPITA EFFECTIVE BUYING INCOME:** This is an arithmetic average obtained by dividing Total Effective Buying Income by Total Population. It measures the total spending power to the number of people and is useful for comparing the relative level of income of different markets because it eliminates the impact of population size. However, because population is measured as of one date (Dec. 31), whereas EBI is measured as a flow over the calendar year, a significant change in population during the year can distort the per capita figure.

**PERCENT CHANGE OF POPULATION.** The percent change between December 31, 1990 census, and December 31,1996.

**PERCENT OF U.S.** The share of total U.S. population, households, EBI, or retail sales accounted for by a given region, state, metro or county. This figure shows the relative importance of an area's major demographic and socioeconomic factors.

**POPULATION.** Updated from the Census Bureau's 1990 Census of Population and Housing, It is a head-count estimate of all the people living in an area at the end of the year. It includes people living in colleges and hospitals, and armed forces permanently assigned to the area, but excludes tourists and transients.

**POPULATION BY AGE AND SEX.** Male and female population totals for eight age groups are useful for marketers who seek to aim their products or services at specific sales targets. For example, the 12- to 17-year-old population is a favorite target of those marketing soft drinks and phonograph records. Several of the age groups are also associated with lifestyle stages a person passes through–such as the preschoolers (0-5 years), teen-agers (12-17 years), and young adults (18-24 years)–which are used in the formulation of marketing strategies.

**POPULATION PER SQUARE MILE.** (See Density.)

**RETAIL SALES.** Total Retail Sales reflects net sales (minus refunds and allowances for returns) for all establishments primarily engaged in retail trade. Retail sales by wholesalers and service establishments are not included.

*NOTE:* Although retail sales are often used to gauge the purchasing power of the residents in a given market, they can also be affected by nonresident "pollution," that is, purchases made by people not residing within the boundaries of the geographic area in question.

Retail sales totals are updated from 1987 Census of Retail Trade benchmarks.

**STANDARD INDUSTRIAL CLASSIFICATION (SIC).** Federal government censuses classify individual business establishments by the type of primary activity in which they are engaged. Retail outlets are classified as two-digit major groups, such as General Merchandise Stores (SIC 53); three-digit subgroups, such as Department Stores (SIC 531); and four-digit detailed industry groups, such as Mail-Order houses (SIC 5961).

**SUPERMARKETS.** Supermarket sales are listed as a component of total Food Store sales because this type of outlet dominates that field. Although the Census Bureau's retail censuses provide no data for supermarkets per se, *Demographics USA* supermarket category is closely related to the bureau's Grocery Stores subgroup (SIC 541).

**TELEVISION MARKET–AREA OF DOMINANT INFLUENCE.** This is the formal term for what is more commonly known as a TV or broadcast market. Definitions for ADIs are supplied by Arbitron, the Control Data subsidiary that generates ratings for broadcast programming. Basically, ADIs are selected by totaling the viewer hours of TV stations whose signals reach a particular county, with total hours then converted to a percentage share of all viewing hours. The name of an ADI is assigned according to the market of origin of the station(s) with the largest share of viewer hours, and all counties whose largest viewer share is given to stations in that same market of origin are grouped together under that particular ADI.

*NOTE:* Because of the reach of broadcast signals, ADIs don't always conform to whole-county geography like metro markets or newspaper markets. In certain cases, Arbitron splits counties, treating each portion as if it were a separate county. Each county, or portion thereof, is allocated exclusively to a single ADI, thus eliminating any geographic overlap. ADI data cover all U.S. states, with the exception of Alaska and Hawaii.
